

CATHARSIS: Awakening Humanity's Full Potential

based on exclusive interview with Dr. Philip Savage, PhD

by Documentary Filmmaker Michael Mendizza

Michael Mendizza -- For more than 25 years, I've been interviewing remarkable men and women; scientists, philosophers, authors and visionaries. Eight years ago I was introduced to Dr. Philip Sauvage who has demonstrated in laboratories in Europe and the United States an unprecedented ability to change physical reality, to induce what we call miraculous healing and much more. In an exclusive interview Philip shared how he acquired some of his extraordinary skills, how he applies them and how they can be taught to others. He described examples of thousands of people and animals he's helped and we explored his ecological and humanitarian goals. Most importantly he described his Imago project, designed to bring about a global evolutionary shift by awakening in as many people as possible humanity's full potential. If we can dream it, he said, we can do it, Dr. Philip Sauvage...

Dr. Philip Sauvage -- Everybody remembers of Atlantis, very fewer remembers of Hyperboria, it's the North pole, also known as Greenland. When the north ridge sank, hence Atlantis, that was the beginning of our Ice age, and then we had to split and the one who were on the east went east and they followed the ice over 2,000 years the first land free of ice they could find was southern Brittany and that's where my family has been settling for about 8,000 years. And my family has been the keepers of this lore of this megalithic civilisation that's 8,000 years old and then the powers of this ancient Hyperborean civilisation passed from mother to daughter uninterruptedly for thousands of years. Here is the roots of my origin.

There is no time any more for messages, messages came and came and came. The children of God came all the time to say basically the same thing be good instead of being bad, we are all one here, give instead of taking, ok, Love is Universal, there is no separation between all things, there's no time for messages. What it's time for right now is proofs. Cells burnt by a laser in the nucleus we take half of those cells working in triple blind system, all the cells I'm taking care of don't die, all the cells I'm not taking care of of course die. We can go even further, that can be done from a distance on simultaneously on several samples of cells and then we can go even further in absolutely heterodox experiment up to the point where people would be ready to see me as a new profit, a new messiah and then hold your horses. The idea is you all are messiah and profits then and you are all associated to what I have to do and I am not, once again, above any body here on this planet. It's for me to teach anyone, with their kids, south central America, in the Bronx, pushing drugs, the dregs of your own society, the hopeless, let me spend half an hour with six of them and I will guarantee that half an hour later they will make exactly the same experiments

with the same rate of success I have done myself, which means that I've just unfrozen your own powers that exist within everyone. I have learned a few things you haven't but this is possible to reawaken to unfreeze this power. I just happen to have more than your five senses hence the difficulty for me to explain what it is, it's like trying to explain to someone being born blind what's a painting by Michelangelo or Boticelli and once again the only semantic tool, the only link I can have with you for you to understand is the experiment, experiment and experiment again, the proof, people are tired of anything else right now and we are running out of time, we need proofs, we need tools and that's what I am here to bring; tools, to re-empower people. That's what they need the most, not freedom, not a new message, not a new enlightenment, just tools.

Dr. Jane Dillon -- He's a scientist and well known for his work in palaeontology, radical but well respected, he was known for his work in law enforcement, criminology, he was known for his eco- humanitarian work, he was on TV shows that drew audience response, twelve million viewers equivalent of seventy million in US terms, that's a lot of people watching one guy and why are they watching him? Because he could do what no one else could do. Where medical science ends is where he begins, what they can do he does not and what they cannot do is what he can. It actually is a science what Philip is doing he calls it a subliminal science and technology, there are laws to that science and if you know the laws to that science you then can apply it.

Dr. Philip Sauvage -- We are not even using our brain at more than ten percent if only we could use it at one hundred it wouldn't be so bad but we can do much better than that and go back to true humanity that's exactly **mind???** in which there's no separation between all beings in which there is no separation between the mind, the soul, the body, one another, parents with children, children with family, family with the village, the village with the country, the country with the world and the world with the universe. You have been lobotomised from all senses, from your knowledge, from your sensitivity, from your heart. You have been cut off from one another but that can be re-established I have the key I can pass it to you, you can pass it to someone else and that's something new also in my project for the first time in my life, I'm going to delegate, why? because time is running out. Ok we can't just sit down and meditate and wait that the greatest consciousness raises, we don't have that opportunity and that chance today. We need to go fast to be very effective to give proofs to people, give them example and then to associate them re-empowered.

Dr. Jane Dillon -- His reputation as a media person with articles in the press, radio and TV culminated in 1990 when he was invited as the special guest on the most popular French TV host show on an independent TV station- TF1. He appeared on that show with several people that he'd taken care of, people suffering from cancer, depression, family; a man representing his family, everyone in his family wife, daughter, himself had been helped. On this show

there was a woman, a mother with a baby, a one or two year old baby that had been diagnosed with cystic fibrosis in the womb.

Dr. Philip Sauvage -- I took care of the father and the mother they were bearing the same defective gene. The mother was pregnant. The kid was diagnosed by the best experts because they were scientists themselves, as having the cystic fibrosis. When I took care of the foetus and he was born; no cystic fibrosis, no signs then when they went deep into the kids DNA it was gone. Since most processes, most diseases relate to self destruction what it takes me is just to bypass you, to circumvent your will of self destruction, to re-establish the harmony, normal functioning of the soul/mind/body interactions and nothing else and stop killing your self.

I've tried in every human languages and I'm not counting the extinct languages, to try to give metaphorical appreciation of what I'm doing, it doesn't work. Once again it goes back to the experiment, I can prove what I'm doing, people don't have to understand it they just have to experience it and do it themselves.

Dr. Jane Dillon -- One of the first things I did working with Philip was to bring about what we call empirical study, double blind study on people with severe third degree burns; we call it the Burn Study. According to medical doctors severe third degree burns cannot heal. There can be no re-epithialization of the skin; if there could be it would be called a severe second degree burn. So when a severe third degree burn shows any re-epithialization of skin, from any treatment, that documents something impossible has happened and that's exactly what we did.

Dr. Philip Sauvage -- When you're exposed to fire it creates an horrible pain nothing but very superficial. Even when you're exposed five minutes to flame when you think about it, assuming you didn't inhale of course the heat and your brain wasn't damaged, it's just like five millimetres of skin that has been barbecued but all your organs are fine, everything is fine just the pain is unbearable and then your brain gives a signal of self destruction and then you start to generate oedemas and everything, that's your body, that's the immune, internal, physiological reaction that kills after burns. My work is very simple; I bypass those, and I do nothing else, it doesn't cost me a thing that's why I don't even have to charge, ok that's public, you can send me any fireman you want any burn I can also teach people in half an hour groups all over the planet, you know some kind of emergency team, in case there would be a nuclear blast, in case there would be something really bad happening. You know I can teach firemen but also volunteers people how to heal burns because they could do it on a wider scale, they can be everywhere in every city where it happens. And this is also the most simple thing to be tested scientifically; give me cells we burn them and we see the difference between the one, the batch I haven't been taking care of and the one I have and people would do exactly the same. And I guarantee someone who has been burned third degree, barbecued, they're going to give

him mega doses of morphine and let him die in a hospital I guarantee that person can play tennis basically without clarification three weeks later.

Dr. Jane Dillon -- No placebo, they didn't know, they didn't believe in any healer they were children, some were under one years old that the results were absolutely extraordinary. There were several children that were not treated because the staff at the burn center didn't tell us and of course the normal reaction, the normal results for children with third degree burns took place in that control group. In two severe cases, the fire burn, the two children died and others their third degree burns didn't heal, they needed grafting and in the treatment group, the children that were treated, there was no need for grafting the wounds were healing in front of the doctors eyes.

Dr. Philip Sauvage -- People who have been processed by me just glow, they just glow, not in an exceptional way they have become normal. We just have lost the sense of what is being normal, the sense of normalcy. We should be alive all the time, at every minute of our life and being happy and being useful in abide to our own duty that would make us even more happy, being of service.

Alison Mc Dermott -- 10 months ago a friend of mine had gone over for a weekend so I had the luxury of seeing what had happened to my friend after only a couple of days visit to Brittany and when she came back she was in such an incredible radiant, healthy state, up right and I just thought wow I have to go have some of that.

Mary Kemmenoe -- It felt like he was removing all the pain and suffering, emotional, physical, spiritual, in all ways, it was all being removed from me.

Hollie Mc Dermott -- I felt like, almost something being like, when he put his hands on me, it felt almost like when you've got a syringe it sucks up. It felt like he was sucking something out of me.

Christopher Layton -- Well what I actually experienced was the sense of him giving himself totally to me. It felt actually like a seed, with the potential for growth that a seed has and which could grow and expand and enable me to be a fuller person.

Dr. Jane Dillon -- Another one that we did which was a clinical trial was on a virus, a herpes virus called shingles. The results of this were equally dramatic. The people that wound up in our little study were in New York, Philip was in San Diego, we were in San Diego, and the doctor called, with two people whose wives were suffering terribly from shingles. So he gave me the information on the people which is minimum; name, birth date, place of birth and I said I would ask Philip for help and I did. Within an hour, his report is written up, within an hour the pain and the itching were subsiding within three hours it was virtually gone. The next day they were like astounded.

Michael Mendizza -- Dr. Ronald Santasteriso, medical director, Sedona Holistic medical center in New York documents two cases of shingles on women patients who healed overnight after Philip Sauvage's distant treatments. Pam aged 48 suffered from shingles six times and knew well the pain and itching that accompanies this disease, often for four to six weeks. After subliminal treatment from San Diego to New York she woke up with no itching, no pain and to witness the scabs almost shrinking before her very eyes. Mary reports that her two year old daughter was immediately healed from an outbreak of shingles by Philip Sauvage after a twenty minute local subliminal treatment. Mary herself broke out in a shingles rash with severe pain and itching, this was completely relieved after a five minute distant processing by Sauvage. This treatment was observed and video taped by medical doctors and researchers at Scripps clinic in Lahoya California.

Dr. Philip Sauvage -- If only you could have one sense more than you have as I do the way you see the universe, the way I'm seeing you or this camera, is so different, there is no difference from the atoms of the wall and your atoms everything is of flux, everything is a movement of energy all the time, there is no life and death then, there is a perpetual continuation and naturally there is no distance. The greatest secret of the universe, there is no time, all experiments in physics but there is no time. Each time we put time to the test it doesn't exist, and since there is no time there is no space; space, time its one single continuum. Actually there is no reality that's why it is so easy for me to surf, to switch between this multiple dimensional multi reality universe and make things impossible happen, they were impossible in one little reductionistic reality but in another one they were so simple to organise. You could do it, anyone can do it, I just happen to be the one right now with a key.

Alison Mc Dermott – Dr. Sauvage has prepared me sufficiently to be able to deliver this processing with clients with health care issues but not animals, we have someone specifically who takes care of animals and in a death crisis then they go to Dr. Sauvage. What I am witnessing is whatever is unique, the qualities they have are enhanced, the deepest truest aspect they may have or may not have encountered in their lives is what surfaces, a cleansing of dead wood if you like seems to go through this cleansing and I've witnessed this now happen with so many people, two of which were people who were dying and who aren't now.

Michael Mendizza quotes Dr. Lawrence T. Williams -- I'm a medical doctor of internal medicine in practise since 1983 in Montgomery, Alabama. Mr Crump had been a patient of mine for over 20 years. In 1991 he was diagnosed HIV positive. According to Mr Crump's laboratory history his viral load fluctuated between 7,025 and 97,000 copies. In the spring and summer of 2004 tests show a dramatic decrease to less than 50 copies. There has been little or no significant variation in Mr Crump's medication regime for the past 2½ years *Dr. Lawrence T. Williams November 3, 2004.*

Dr. Jane Dillon -- When he went back after receiving Philip's processing he had two independent labs do tests on his viral load and his viral load report came out it was a significant decrease from 37,000 down to less than 50 copies. That's astounding.

Dr. Philip Sauvage -- You're healthy when you're happy, you're happy when you're on duty when you are one with the divine and with yourself. To me that's the division of health. It's a proactive and what I've called at one point 'healthening'; which means a dynamic of health. Not just being perfectly sound, powerful, young also. I mean what are those free radicals? Who said we are supposed even to die? We die because we are too many and we have lost the key but that's not necessary at all. It's a way by which nature is getting rid of too many.

Dr. Jane Dillon -- From cancer to brain tumours to heart disease to crippling effects of some, you know, operation or mistake or accident, kidney failure. I have seen a restoration of vision, of things that are simply impossible according to medical standards and it has been, I don't say unbelievable anymore, or amazing, and he doesn't, he says it is not extraordinary, in each one of us are these healing powers, these ability to self heal and he awakens them, empowers, enhances, removes- the pain, the fear, that alone liberates the being to many degrees, psychologically, emotionally and the effects show physically.

Dr. Philip Sauvage -- When I'm taking care of someone in really bad shape, really dying, first thing I blend, its easy we're always one, but you just don't know the system, I do. We blend. Then we just detach from this little reality, this realm of limited possibilities and go to another one where things are much easier to fix and then go back, it's just what I call surfing. I'm just bypassing the system and implanting into their deeper mind and freewill center heal your self instead of destroying yourself. You heal yourself, I don't heal, there are two healers- God, you, all of you. I'm just intervening, I'm just in between, surfing.

Dr. Jane Dillon -- A man who could barely walk or talk, Alzheimer's for five years, this man after being treated by Philip once was able to stand up in a court room and demand that the judge give him his business back. Another case was a child working with a doctor that we worked with who had been born without a Corpus Callosum, the part of the brain that integrates the left and right hemisphere. This child was born into a Mexican family in east LA, a poor family they loved the child they could do nothing, could not move.

Michael Mendizza quotes Dr. Dina Villanueva -- Carlos born premature at 34 weeks and without a Corpus Callosum did not talk, walk, sit up by himself or feed himself. After a few months of treatment he began speaking one syllable words, to distinguish his right and left. He began feeding himself and is now able to sit up in a back supported chair. He's able to interact with people in the environment

moving his arms and legs and using his muscles for facial expression. Another patient was two year old Danielle suffering from lung cancer. She had received a round of chemotherapy when Philip and I began working on her. After four weekly treatments, she no longer needed chemotherapy. Today she is cancer free. *Dina Villanueva September 9 1998.*

Dr. Jane Dillon -- At the California Institute of Human Science which is where I met Philip they were doing two years of testing on him. They were testing his brain waves, they were testing his before and after of all his patients for two years. He broke the records in all cases in one case it went off the charts- the chart didn't have a limit for his results. It was a kidney failure and all of a sudden after one treatment bursts of energy in to the kidney the person was revitalised with health that maintained, it's documented for several years. Also at the California Institute they have a shielded room, it's called a faraday cage and they're very proud of it, there's very few of them built and it's built to block electromagnetic waves. People at the institute were documenting Philip. So the idea was for Philip to do a processing while in the shielded room. If there was an effect from his processing that was observable in the subjects while he was in that shielded room that his technology has little or nothing to do with electromagnetism, and electromagnetism is a structure of our physical world. So that what he is doing is taking place at a much more fundamental level and that's exactly what happened. The effects were astoundingly dramatic and documented that Philip does in fact take care of the cause of the problem, that's what he's known to do- he goes at the cause and then the effects show--psychological, emotional, spiritual and physical, that's and they're symptoms, those are the symptoms of his treatment. Also what they did at this institute and at other institutes in California, other doctors and researchers got in on this and mapped his brain, the EEG standard way and then another way called the brain mapping. In one case the brain mapping that was done shows a picture of the alpha band and it increased from resting to processing state forty times, not forty percent, forty times what it started out as. These scientists had never seen anything like this, ever, from a human brain.

Dr. Philip Sauvage -- My real project is called Imago, I-M-A-G-O, which in terms of psychoanalysis means a state of perfect completion, in terms of entomology, insect, it is the perfect insect after larval life, sometimes the imago state lasts only one day, but what a day! We all are larvae compared to our own potential and there is an evolutionary leap that's long over due, actually that has been blocked by those forces of chaos, those forces of destruction for millions of years, remember I'm a palaeontologist and I know exactly what I'm talking about. There is a leap that's long overdue and that's my project to turn everyone from its larval state into an imago, complete being and it takes just starting the whole process, priming the pump, having a team of a few dozen people whom I've told directly who are going to taught others and so forth. One person can teach ten, ten persons can teach one thousand and it goes exponential and very, very fast, once again from proofs. It couldn't have happened ten years ago, it couldn't have

happened a hundred years ago, it had, no matter how sad it is, to be that cataclysmic, that disastrous the situation, to the point where everybody's walking with their fingers crossed now, even governments, they know that time is running out and its exactly when things look completely desperate and hopeless that actually there is a window of hope opening, that's the positive part, that's the hope. I wasn't ready, you weren't ready, we all are ready now and we have to do it, why because it's possible, before it wasn't. So I'll delegate people who'll delegate themselves and so forth and we can change things and keep horrible things to happen, they will happen either horribly, or beautifully, let's make them happen beautifully, peacefully and painlessly, it's like a birth- it can be convulsive, it can be otherwise- it can be also beautiful. And the real name, the real concept, my family, my clan they call themselves the midwives of God, and that's exactly how it fits today, we need midwives, we need to teach midwives for a new birth.
