

## RUSH Documentary Transcript

Maria: So I called them and the burn went away, the pain was gone but I kind of just though, na, that's not really, it would have gone away anyway, so it was a no call. But then at Thanksgiving when it was very hectic and the turkey grease... I had the pan and the turkey grease flew out of the pan and on to my foot and it was VERY painful and it was red and I remember just thinking, "oh this really hurts", and she said "call the fireburndoctor" so I'm like "I don't have time" "Call the FireBurnDoctor!" so I called, gave them the information and I can say within 20 minutes the pain was considerably less like from an 8 or 9 down to a 4 and then within another 20 minutes it was about a one or a 2- about a one, a one. Yeah. I think it would have been much worse, it would have been one of those things that hurt for days, and **the healing process was miraculous, you just say miraculous, you know something that would take 36 hours took, you know, took 36 minutes.** And it was, it's very, it's miraculous, **it's amazing, it's almost like think and it happens, it's that fast. It's very - it's amazing.**

Lorraine: I called the FBD because I was lighting my furnace and it wasn't lighting and it wasn't lighting and the gas was accumulating and all of a sudden it lit and torched my hand, burnt my eyelashes off and my eyebrow and my hair and I called the FBD right away and within probably 5 minutes the pain was subsiding, but it never blistered, and I was able to wash dishes in hot water probably 7 hours later.

John: this incident happened about 3 years ago in Washington State, I was fooling around with a new lighter for a new pipe that I had just bought and one of those tri-flame type- gas, propane or butane type lighters that I was trying to adjust the damn thing and it went off! I was looking at it, playing with it and it was a long flame it just went "boof" yeah. But just that quick. And anyway, what happened was it burned, the fire itself burned my face and in so doing I could tell that it was going to be a burn, it did not feel good at all but I remembered the FBD team number, I had it on my phone, called and left a message, they called me back it must have been within 10 minutes or so, maybe less and **already I could feel a difference, right away, minutes it was quite amazing. I was fully expecting a blister and all the accoutrements of a good fire burn but that didn't happen, I am glad to say that it didn't even blister and even now today there was no scar, no mark there: the next day I would not have known that I had a burn.**

Nick: My experience of the FBD came about 2 years ago and **I was working with a soldering iron which I had never used before. For hours I am playing with this thing and I had read the instructions: do not touch 800 degrees** whatever. So I had these things; a double pair of gloves on, but it so happened that both these pairs of gloves had a hole. So after a couple hours I got careless. I touched the tip of this thing, grabbed the wrong part and my skin hit the metal and I freaked out because it hurt like hell and I've been burned before so I knew the only thing that could stop the pain is ice. So the first thing I do is run inside and get ice and I remembered hearing about the FBD on the radio and had stored the number. **I'm in a panic, I look online find the number, the pain is increasing as I am looking at it so I know it's going to be a bad**

burn, ice is not helping at this point, called, have to leave a message, nobody answers, leave the information they ask and I get a call back a couple minutes later- at this point I was, he said "what's your pain level?" and I'm like "err err 2?" but I think I just felt that I had to say something because I called with a burn but really at that point it was gone almost and I was amazed. I said, "Did you do something?" and he said, "Yes". I was expecting the pain to come back, it did not, other than a tingle here and there, and an hour later I called back like he said and there was no pain! You know I was expecting a blister and there was only 2 little white spots, 2 little "doo doo" where there should have been a huge blister.

Mary: There was a little girl in Ghana whose house caught on fire, there were 3 children and her whole – she lost tissue almost across her whole abdomen and down the front of her legs. Now burns if it's much larger than a quarter they usually have to graft, skin graft – that entails using skin from another part of the body and putting it on there or using – if that's not available they have grown skin that they can use and various other methods but this takes weeks, months, years to do most of the time when you have burns over 40% of the body the patients very often don't make it.

This child had been taken to hospital and I think it was a family friend who called in the burns and this child healed, we have photographs of her now and it's just amazing. Normally when you get burned it takes all the pigment out of the skin – she didn't even lose the pigment on the skin, it grew back of its own accord, **I just thank God every day that this is an ability that we have now.**

Alison: **What if there were a way to heal fire burns within 30 minutes of exposure? What if fire burns could be healed remotely in any country in the world -- Iraq, Afghanistan, India, Africa, Australia, Mexico, and America? We invite you to help prove this is possible, it's easy and it's free and we just need 3 pieces of information on anyone burned by fire that's name, date of birth, place of birth and if possible send a photograph. That's it and you get to see proof of how this breakthrough treatment works.**

Mendizza: For more than 25 years I have been interviewing remarkable men and women – scientists, philosophers, authors and visionaries. **Eight years ago I was introduced to Dr. Philip Savage who has demonstrated in laboratories in Europe and the United States an unprecedented ability to change physical reality to induce what we call miraculous healing and much more.** In an exclusive interview Philip shared how he acquired some of his extraordinary skills, how he applies them and how they can be taught to others. He described examples of thousands people and animals he's helped and we explored his ecological and humanitarian goals. **Most importantly he described his IMAGO project designed to bring about a global evolutionary shift by awakening in as many people as possible humanities full potential. If we can dream it, he said, we can do it.** Dr. Philip Savage...

PS: There is no separation between all beings, which means there is no separation between the mind, the soul, the body, one another, parents with children, children with family, family with the village, the village with the country, the country with the world, and the world with the universe and with God. All one, oneness, unity. That's the whole point. That's what we have all

forgotten. That means when I am taking care of someone, you know, from one inch or one thousand miles, it's just the same. There is no separateness. There is no separation between things. Everything is a flux. Everything is a movement of energy all the time. There is no life and death, then. There is a perpetual continuation and, naturally, there is no distance. Space-time, it's one single continuum. That's why **it's so easy for me to surf, to switch, between this multiple-dimensional multi-reality universe and make things impossible happen. They were impossible in one little reductionistic reality. But in another one, they were so simple to organize.** You can do it. Anyone can do it. I just happen to be the one right now with the key. I have the key, I can pass it to you, you can pass it to someone else. **We need to go fast, to be very effective, to give proofs to people, give them example and then to associate them, re-empowered,** that's it.

### Tina and Christina

Alison: Can you describe, what was there? Inflammation? What mark was there on the burn?

Tina: When I got out to Christina it was shrieking, really loud shrieking and I got out there and there was still a heavy layer of it on her hand and we tried to wipe it off and get the water to take it off and a good layer of some swelling, redness and it looked like you... it looked like blisters were starting to form...

Christina: Yes, there were little kind of bubblish things

Alison: And what happened to that after you called the FireBurnDoctor?

Tina: Within 10 minutes of calling and leaving the information on the line, 10 minutes later I heard Christina say **"Mom there's a sensation in my hand, it feels kind of good, it feels pleasant!"** You know? And I just would watch I did not keep bringing up her hand. I would just watch and **I watched the redness little by little go and any swelling go and at that 10-minute point it was as if she was disengaged from the experience. That it DIDN'T HURT** and I watched her, playing, she went on to sing some songs to some music that she had, talking about boys and absolutely nothing; it went away.

Alison: So you just forgot about it like it never happened!

### Chris Fleming

Alison: Chris in your own words, tell me what happened.

Chris: I had been working with the pressure washer from about 11 o'clock in the morning till about 4 o'clock at night and the motor was really hot and it had run out of gasoline so I went to refill the tank and when I was refilling it I was leaning on it and I'd gone and put my hand on top of the hot part of the motor and as soon as I put my hand on it it pulled back and my whole hand was blistered white and really, really like throbbing, really painful.

Alison: and on a pain scale of zero to 10 what would you say that was?

Chris: About a nine and a half,

Alison: So that really hurt

Chris: It was really intense, it was like one of those throbbing type pains and I immediately remembered hearing you say that if you ever got burned, on the radio show, you called in and I heard you put out the phone number and I'd saved it on my phone and I remembered, hey you know maybe they can do something. I called them....

Alison: SO you called and you gave your name, your date of birth, your place of birth and a fireburndoctor team member called you back, what happened then?

Chris: Yes I would say that I did not even wait 3 or 4 minutes and I got a call back and I was kind of freaking out and he just told me to calm down.

Alison: We have those phone calls; here is that first phone call now where Chris called the FBD team.

**[Screams], Ok, my name's Chris Fleming, Christopher C-H-R-I-S-T-O-P-H-E-R – F-L-E-M-I-N-G, Christopher Fleming, I'm 22 I was born on July 16, 7/16, 1986 and Dude I'm in Norco California and I've just stuck my hand on a @\$%^&\* pressure washer motor right now and it's burning hot and my whole @\$%^&\* hand's on fire right now. And my telephone number where I can be reached... It hurts really, really bad, I need burn cream, Ow 909... Yeah bye.**

Alison: So within how long after calling the FBD did you call again?

Chris: He told me to return the call within half an hour, let him know how I was doing and I called him back like I said and he called me right back. I left a message to let him know how I was doing.

Alison: OK we have those messages now, here are his 2nd and 3rd calls that Chris left on the FBD team hotline.

Chris: Yeah this one was left and then after I left this one about 10 minutes later was when I left the 2nd one.

Hey man, what's up? This is Chris, my telephone number's 909... **I just want to call and report back to you about the pressure washer burning my hand off. When I called you Dude I was on my way down the Rite-Aid and I called in excruciating pain, I couldn't even think straight, my hand was throbbing** and it like, it was really bad Dude, and **I don't know what you did but I Love You Man! Thank you so much, you completely, I don't know how you did it or what you did but whatever you're doing it works, I am going to tell all my friends and family**

**and give everyone your phone number Dude because it worked! Whatever you did Dude, I don't know, but my hand's not even red any more** Dude! I was so happy (spoken in the studio)

The only thing you can tell that I got burned is that my skin looks like it got, like, what is the word?... like wrinkly. SO, a little bit and to say something about sensation — my pain is like at like 1, less than that like 1 and less! Sometimes it's 1 and most times less! But Dude thank you so much for relieving. I don't know what you did but you're great Dude, thank you.

Alison: So your hand by that call, what was the pain level then? You're saying 1, 2?

Chris: Yes I was able then, I was still working at that point, I had gone back to work!

Alison: You went straight back to work!

Chris: Well I actually like sat and hang out by the computer and was hanging out and then after a little bit I made that phone call and after it started getting better I went back to work and there was still a little bit of pain but not even 10 minutes later **it was BOOM like an instant thing, I didn't even think about it anymore I had to stop and think, "Wait! I just hurt my hand, I shouldn't be using it to hop over the fence or using it to pick up something, it should be hurt."**

Alison: So here is call 3 after it had completely gone.

Voice mail Machine: Message received yesterday at 6:10 pm... Chris: Hey Doctor, what's up? It's Chris Fleming, I called you earlier.... I just wanted to call again because I haven't got back to you Dude and you told me to call you back, let you know how I am doing. **This thing is amazing Dude, I don't know what you did or how this is happening but like Dude, I love you... and Fantastic, I can't even tell that...** [asking a friend] Can you even tell that there's anything wrong with my hand? [No] **It's like nothing even happened Dude!**

**I should have taken a picture because before it looked like my whole hand was blistered it looked like it was going to blister up, it was all swollen and it was all red... there's nothing wrong with my hand, it looks like, Dude, like nothing even happened to it.**

Grant Fryer

Jed: Ok Grant

Grant: Yes

Jed: Tell me your name and what happened, describe it to me and walk around and show me.

Grant: My name's Grant Fryer and the pressure has been running all day today so I went to check what's going on back in here and I drained the water off and I heard a leak up here on the tube and I reached in to see and I grabbed a hold of this piece of copper tubing and said Holy Shit, I caught this finger, this finger, this finger and this thumb.

Jed: Show me again, your fingers

Grant: This finger, this finger, this finger and this thumb

Jed: Ok how does your pain feel right now?

Grant: It's about a 7,

Jed: A 7

Grant: A 7/ 8 and when I first touched it, like I said Holy Shit! It was very painful! I mean cold beer was the only thing that stopped it from hurting and right now it's subsided somewhat from the original burn. So I came inside to tell you that the pressure was burning up and I put my hand in cold water and grabbed a cold beer

Jed: So I ran out here and turned off all the switches and

Grant: Yes you came out here and turned off the power and said "call the burn doctor and I'm like "The Who?" and I said "I'm not going to give out all that information! And I called that gentleman and gave him my full birth name

Jed: Let's have a look at some of the equipment you are working on. How many times have you been cut up, beat up...? You deal with a lot of pain.

Grant: I mean I pick up hot parts all the time.

Jed: Turn that machine on

Grant: I pick up hot parts all the time and this is the hand that I use that's burned so you see... (Using the hand!!)

Jed: So if he says he's hurting he's...

Grant: **no, no wow, well I have been through all kinds of pain but this one here was... I had to stop!**

Jed: So you are saying it was a nine?

Grant: **9 / 8, it stopped me dead in my tracks I mean**

Jed: How does it feel now?

Grant: Better

Jed: How long has it been?

Grant: err 25 minutes

Jed: What time did it happen, let's do a time stamp

Grant: **9:10 is when it happened and we talked to the gentleman at like – I hung up at 9:15, so within a 5 minute time frame**

Ok so when you hung up from then until now it feels a little better

No it does feel better.

Jed: It feels better?!

Grant: It feels better! I mean I couldn't ...

Jed: **5 minutes ago you told me it only felt good if I held my beer.**

**Grant: That's right! Exactly (laughing!) I mean if I didn't have the beer in my hand, if I let go of the beer the pain ranked up too much and I couldn't take it.**

Jed: Describe the pain what was it like throbbing, was it with your heart beat?

Grant: No no no, just steady Burn

Jed: Steady on? Now you've been burned before now

Grant: Many times,

Jed: **what did you tell me about this burn when it happened "these are going to be blisters?"**

Grant: "These are going to blister out"

Jed: yeah he goes, "see my finger tips, these are blisters"

Grant: OK, Yeah...

Jed: OK, so have you even washed your hands?

Grant: No I haven't

Jed: Let's go wash your hands and take a look. We're going to turn off the camera now and we're going to wash his hands. Let's look at it one more time though, let me see your hand.

Grant: ok there, there, there and this thumb right here,

Jed: ok now his hands are dirty so it's hard to see on camera it's also blackened my view finder so let's get it washed up and see what they look like.

Jed: You seem to be rubbing your hand like it's not even burned

Grant: No I mean its

Jed: or are you rubbing it like it belongs to somebody else?!

Grant: No

Jed: Does it still hurt?

Grant No I am saying **I am surprised how good I can scrub it**

Jed: Does it hurt still?

Grant: No, it doesn't

Jed: No pain whatsoever

Grant: No it doesn't hurt, it doesn't hurt Jed!

Jed: Say that again!

Grant: No pain!

Jed: No pain whatsoever

Grant: No I'm not ####!!!! you man

Jed: Get the #xx#XX! out!

Grant: I'm not kidding you, but look I did blister right there, but Dude, I'm telling you right now man

Jed: It doesn't hurt

Grant: No it doesn't Xx#X!!X hurt.

Jed: Hold your hand out, let me look at your hand

Grant: Well I mean, so that one blistered and there's a blister right there

Jed: Ok so you've got a little bit of blister

Grant: blister

Jed: But it's not hurting that's what you are saying.

Grant: I would have expected that to be blistered all the way across

Jed: Right. So it's not blistering as much as you expected so far and the bottom line is

Grant: It doesn't Xx#X!!X hurt, excuse me, it doesn't hurt, it doesn't hurt Jed

Jed: Right on!

Jed: I just shot my phone that showed the FBD number and I showed that it's 9:39. At 9:18 you called the FBD and your pain... can you show me the blisters please? You told that doctor that you had a pain threshold of an 8 or a 9.

Grant: Right

Jed: And that was 25 minutes ago

Grant: Yes

Jed: approximately

Grant: Yes

Jed: You are now, **what did you just do? From what I can see you're back at work.**

Grant: Yeah, laughing.

Jed: **From what I can see you haven't even stopped working.**

Grant: No... it...

Jed: What's your pain threshold like?

Grant: 2 maybe / 1. I can tell that I burned my fingertips just because I, my mind says I know it. But...

Jed: All of 30 minutes later!

Grant: **Yeah put it this way 15 minutes ago I could not not hold something cold – I had to have something cold to keep the pain away. The minute I let go it'd go up to a nine or ten.**

Jed: Right, There you go!

Jed: Next morning, 14 hours later.... Grant can you talk to us for a minute?... Alright tell us about your hand. What happened last night.

Grant: **Well after burning my hand last night and calling the FireBurnDoctor and going through the protocol he required I got some small blisters on my fingers but I don't know I've burned my hand.**

Jed: Can you hold them out still for me so I can see them...? Right on.

Grant: **But I can't tell I have burned my hand apart from the fact I can see it visually. I mean I have no pain, if you squeeze the blister – a little irritation but no problem! (Laughing)**

Jed: So in other words you'd suggest to other people that it worked?

Grant: **It worked for me and I say, you know it's so crazy and you're sitting there so speculant and say it's all a joke, well joke or not it there's things that happen and this worked for me.**

Jed: Thank you

Grant: **I would tell other people to give it a shot, it's painless to try!**

### Richard Cox

Alison: So Richard Cox, who is another recent burn case, who burned himself on a metal mesh basket in his bedroom that had caught fire and he walked the distance like Kung Fu style out of the house with this metal basket. That was a third degree burn and he was on the way to the hospital and called his father, his stepfather, who was connected to a friend of mine and cut a long story short those details were sent through. **Before he got to the emergency room his pain had gone; he didn't need pain killers by the time he got to the emergency room.** The nurse thought it was going to need desluffing, the usual thing with a nasty burn they have to do to prevent infection. **By the time the duty doctor came around to examine it after the nurse had done her thing he said "I don't think we need to do anything, put a dry dressing on it and send him home."**

Richard: It worked on me on May 26th 2009 my hands were badly burned in a fire, I grasped hot metal really hard, very painful, on the way to the hospital, the pain disappeared, no

infection ever, my wounds healed in record time, I didn't even know anyone took care of me from a distance – my step father gave my information.

Joe Lowe: Fire Chief I know it works.

**Philip: Since most processes, most diseases relate to self destruction... what it takes me is just to bypass you to circumvent your will of self-destruction to re-establish the harmony, normal functioning of the soul, mind, body interactions and nothing else and stop killing yourself. If we can come back to the burns now for example, that's an interesting subject because burns represent an anomaly. In terms of diseases the only anomaly are burns I guarantee it's always a 100% rate of success period, if I fail once on burns I'm out of the job, take my word for it.**

**Third degree burns, burns I could take care of 100,000 a day without bragging. 100,000 people burned simultaneously, why? It's because it doesn't take me anything, it doesn't cost me an ounce of energy, nothing. It's just like bypassing you completely and shifting reality once and for all.** Do you know that there are people who died of cold in a locking room, frigorific system who believed the system was on but it wasn't and they died at 72° Fahrenheit of cold with frost bite and everything? That's the power of the mind. You can also suggest to someone that he is holding a instead of a pen – some kind of electric resistance that's very hot and you're going to generate burns second degree on the fingers, that's the power of the mind. **When you are exposed to fire it creates an horrible pain, nothing but very superficial even when you are exposed five minutes to flame assuming you didn't inhale of course the heat and your brain wasn't damaged. It's just like 5mm of skin that have been barbecued but all your organs are fine, everything is fine, just the pain is unbearable and then your brain gives a signal of self destruction. And then you start to generate edemas, and everything, that's your body, that's the immune internal physiological reaction that kills after burns. My work is very simple, I bypass those and I do nothing else it doesn't cost me a thing, that's why I do not even have to charge, ok that's public. You can send me any fireman you want, any burn. I could also teach people in half an hour groups all over the planet, you know, some kind of emergency team in case there would be a nuclear blast, in case there would be something really bad happening. You know I can teach firemen but also volunteers, people how to heal burns. Because they could do it on a wider scale, they could be everywhere in every city where it happens and this is also the most simple thing to be tested scientifically, give me cells we burn them and we see the difference between the ones, the batch I haven't been taking care of, and the one I have. And people would do exactly the same. What people need once again: proofs, proofs, proofs, experisism, not new messages.**

**Hollie: It worked on me, in 2005 my arm was badly burned and fixed in three minutes, my mum took care of it, she learned how to do this just like Dr. Joseph did.**

Dr. Joseph: Dr. Joseph, medical doctor, emergency room and private practice, student of Philip Savage. Philip Savage's advanced science and technology is called Subliminal Distant Influentiality SDI which is why Philip's fire burn tests prove for the first time at a scientific level the existence of a higher power that can be accessed for dramatic accelerated healing unknown

to modern medicine. When it is used on fire burn at a distance, the results of SDI are extremely dramatic, highly visible and immediate. **SDI can also be used in many other human and animal crisis and all health problems for example drug and alcohol addiction, accidents, childhood trauma, including sexual abuse, family and business crisis, it can also be used for private and international security.**

**Tad: In 2007 my neck was broken in a car crash, a C2 break just like Christopher Reeve, but I was back to work in a week, Philip took care of me immediately, from a distance.**

Voice mail machine: First saved message sent Wednesday December 19 2007 at 10:50pm,  
Urgent Message:

Man: Hello Doctor I'm a friend of Tad's, he's from Seattle, and Tad was in a very bad car accident and his car is on the median here and Tad asked me to call you and let you know what I am seeing for some reason. He has a bruise above his eye and says his right arm is hurting him very much and so is his right leg and his left leg and his left arm. His car is in the middle of the median and it's very badly cut up and he was hit by a jeep somehow and they are putting him on a stretcher right now and they're bringing him to a hospital and they had to cut his clothing off I don't know what kind of serious damage this has done to him but he's speaking and he's really barely able to move. They are cutting his clothes off... He can't hear me anymore. He's in the ambulance now.

Paramedics: .... Talking to each other... (something about) taking care of "the gentleman..."

7 months later:

Tad: Not nice. I was T-boned by an SUV at 40 miles an hour and he crushed my car: the window slammed against my head at 40 miles an hour; shattered the window - broke my neck. **The firefighters had to cut me out of the car with the jaws of life. Policeman on the scene said that he was surprised I was not mashed potatoes!** When I got to the ER they ran me through all kinds of CTs, MRIs and X-rays. In the follow up visit I asked the neurosurgeon, **"why did you run me through all these scans?" and he says "no one comes out of an accident like that without multiple facial fractures, multiple skull fractures, torn tendons, severe brain bleeds if not brain damage and internal chest cavity injuries" and I had none of that.** I did have a C2 break in the neck, now this is something else interesting: the neurosurgeon tells me I had the same C2 fracture as Christopher Reeve and the only difference between Reeve and me was that Reeve's tendons gave out; mine held. Now Reeve was Superman, an expert horseman, and body builder, and me (pointing to his neck). I work on a computer all day. Reeve was also in a coma for 3 weeks and quadriplegic for the rest of his life - short life. **I didn't even have a concussion; with the window shattering against my head at 40 miles an hour - no concussion! I was completely conscious the whole time, was able to assess my injuries, fully possessed with the ability to give instructions for a phone call to be made to call in Philip Savage to help, no pain -- that's in the documents, no pain, "Patient refused pain medication".**

**It's beautiful not to be quadriplegic, not to have been in a coma, to have been fully conscious and no pain, it's beautiful. But beyond that, the prognosis, after getting to the ER was 9 months to a year for full knitting of the bone, being in a neck collar for at least 6 months, and**

**somewhere in around 6 months' range whether there would be therapy or not, I didn't need any therapy at all, for this neck.**

On January 11th, 2010, two years after my almost-fatal car crash, I was riding my bicycle home from work with a heavy pack on my back, when I suddenly fell head-first off the bike onto the pavement, flat on my face, breaking my nose and hand. The face and nose being DIRECTLY in front of the neck my chances of crippling life.... **All the doctors I had seen 3 years earlier had told me repeatedly to be very careful how I step off the curb because one wrong move and I could be dead or paralyzed for the rest of my life, well that didn't happen, I walked away from this bike crash with no pain, not even the slightest twinge in my neck and went to work the next morning.**

**Two weeks later I took the X-rays from this accident to my former neuro surgeon Dr. Khoo to find out what may have happened to my neck.** Dr. Khoo was shocked and amazed and said that nothing, absolutely nothing had happened to my old broken neck. He said that it had healed up perfectly and was still perfect even though I had just smashed my face and broken my nose. **He said the joint spacing was right, there was no tightness of tendons, my range of motion was great and if he weren't my neuro-surgeon 2 years before he would not even know from the current x-ray that my neck had even been broken. What a fantastic gift from Philip who I then told Dr. Khoo all about.**

Christian: Let's put it this way, **the day I walked out, or the afternoon I walked out of Philip's office, I wept with relief, I sat and meditated and then I went for a walk in unfamiliar mountains and I was doing – and navigating and doing physical movement better than I have ever done in unfamiliar territory, dangerous mountainous territory. I went out for 24 hours, totally green to the whole situation.**

**Alison: Did you have any withdrawal, any of the usual coming away from drugs...**

**Christian: No there was no pain, there was no pain, no withdrawal and just like I said, a blessed relief from a huge painful unhealthy burden and habit that I had that I no longer have.**

Nine Years Later:

I was a drug addict for over twenty years. Now I am not. At 36, I had been seriously damaged by LSD, DMT, ecstasy, cocaine, heroin, amphetamines, crack, mushrooms, marijuana, hashish and alcohol.

Philip removed the addictions and the misery of an entire CHILDHOOD engulfed in alcohol, drugs, my father's pornography and the violence that was the consequence of these afflictions. Now, after 9 years, no drugs, no alcohol and no violence.

**There was absolutely no pain, no symptoms of withdrawal. My vision, my hearing, my**

**memory and my balance; damaged from head injuries and substance abuse, were restored during the course of two visits to Philip Savage.**

**...It is an ecstatic experience to be blessed by Philip's cares, to receive so much in just minutes with him, having spent years consciously and unconsciously destroying my own abilities and potential....**

**Restoration is an understatement; enhancement is the boon of Philip's cares, radical enhancement. But not just for me – everyone I know who has been to see Philip Savage has received major miracles.**

**A friend of mine suffered a life of sexual abuse and rape since she was a baby. After just one visit to Philip Savage she could stand tall, proud, a liberated woman, declaring "none of it ever happened".**

**These personal accounts bring light to our direct relation to the environment and the world at large where now we need the biggest miracle of all for our Earth herself. Those degradations, diseases and disasters that have been perpetrated upon this Earth; they were giving me nightmares throughout my entire childhood. Never has a solution been offered to eradicate these gravest threats facing us all... No one is exempt from the three strands of destruction converging on us right now – viral, climatic and geo-political chaos are taking a major hold over the world. Scientists, environmentalists, the common man have been crying out for a solution, a global solution for decades. The world's richest men at the top are very lonely. They do not have a solution and they know it. Philip Savage is calling out to us, reaching out, for all his life and for this final time -- informing the world's elite of his unique ability to help.**

**Without Philip's cares, I would already be dead. Thank you Philip for my life. I now see how important your presence is for everything. Thank you.**

**Paddy:**

**On August 24th 2006, Philip Savage took care of a 19 year old crippled horse called Paddy, from a distance of more than 1,000 miles, bringing about the most dramatic restoration of life ever seen in a real time video.**

**Rosie: So what we are going to do is to get him to move firstly slowly and see if we can get him into trot just to prove how difficult it is for him to get into trot. First of all I'm going to do it with Dolly to show how easily she'll go into trot and then faster and faster...**

**That's a normal horse, a normal horse will do that until they're about 18/19 years old pretty much the same as that and as far as Paddy's concerned, that's not impossible but its hugely uncomfortable and he hates the pain that he gets in his front legs from it. So we're just going to display how different Paddy feels about that idea. Go on Pad, move, come on, come on...**

**Alison: Most neighboring horse owners and veterinarians recommended that he should be put down to end the horrible pain in his arthritic legs and uncontrollable itching that left him with scabs, open sores, thick hard skin and severe loss of main and tail. Paddy was shrunken, miserable and barely able to move for lameness, with a staring coat and a permanently resigned grimace on his face.**

Rosie: He really can't, he can trot a little way but to get him into trot just for a few strides is extremely difficult. Go on boy... See, he's in trot now.

**Five minutes of Philip's treatment – actually a specially trained student of Dr. Philip Savage did the processing - Paddy was running, running around the field for the first time in years, this took everyone witnessing the event so much by surprise!**

**Just 2 weeks after that processing Paddy was strong enough to run all over with Dolly, his three year old companion, displaying an impossible transformation and improving dramatically every day. Paddy has regained his original size, stature and musculature of a heavy Irish Cob. His coat and skin were totally restored, his eyes are shining and keen, and his main and tail became longer and bushier than ever before! He was able to be ridden and exercised daily and did so with amazing agility, dynamism, and a youthful zest for life. Paddy ran all over the field with energy, enthusiasm...and great beauty – even trying to jump the fence which before was totally impossible for him.**

Before Philip Savage took care of Paddy, Rosie invited a few dozen people including me to view this poor horse, so that after Philip's processing these people could witness something that they would never believe unless they saw it with their own eyes. Everyone was amazed, wiping their eyes, dropping their jaws and virtually speechless. **"Wow" was repeated over and over. "Before he looked at least 28, now he looks half his age!" Some proclaimed him to be a completely different horse. These people wrote their astonishing reports.** This video documentation is the only one of its kind in the world because no one else in the world can do what Philip Savage did or does. Proof is what people need; here it is for those with eyes to see.

Dr. Dillon: **He's a scientist and well known for his work in paleontology, radical but well respected, he was on TV shows that drew audience response, twelve million viewers equivalent of seventy million in US terms, that's a lot of people watching one guy and why are they watching him? Because he could do what no one else could do. Where medical science ends is where he begins, what they can do he does not and what they cannot do is what he can.** His reputation as a media person with articles in the press, radio and TV culminated in 1990 when he was invited as the special guest on the most popular French TV host show on an independent TV station- TF1. He appeared on that show with several people that he'd taken care of, people suffering from cancer, depression, family; a man representing his family, everyone in his family wife, daughter, himself had been helped. **On this show there was a woman, a mother with a baby, a one or two year old baby that had been diagnosed with cystic fibrosis in the womb. Philip took care of that baby and the baby was born without**

any trace of cystic-fibrosis, nor was it evident in the mother's genetic structure anymore. That was a premiere, in genetic treatment and that was pretty astounding.

From cancer to brain tumors to heart disease to crippling effects of some, you know, operation or mistake or accident, kidney failure. I have seen a restoration of vision, of things that are simply impossible according to medical standards and it has been, I don't say unbelievable anymore, or amazing, and he doesn't, he says it is not extraordinary, in each one of us are these healing powers, these ability to self heal and he awakens them, empowers, enhances, removes- the pain, the fear, that alone liberates the being to many degrees, psychologically, emotionally and the effects show physically.

At the California Institute of Human Science which is where I met Philip they were doing two years of testing on him. They were testing his brain waves, they were testing his before and after of all his patients for two years. **He broke the records in all cases in one case it went off the chart – the chart didn't have a limit for his results. It was a kidney failure and all of a sudden after one treatment bursts of energy in to the kidney the person was revitalized with health that maintained, it's documented for several years.** Also at the California Institute they have a shielded room, called a faraday cage and they're very proud of it, there's very few of them built and it's built to block electromagnetic waves. People at the institute were documenting Philip. So the idea was for Philip to do a processing while in the shielded room. If there was an effect from his processing that was observable in the subjects while he was in that shielded room that his technology has little or nothing to do with electromagnetism, and electromagnetism is a structure of our physical world. So that what he is doing is taking place at a much more fundamental level and that's exactly what happened. **The effects were astoundingly dramatic and documented that Philip does in fact take care of the cause of the problem, that's what he's known to do.**

Also what they did at this institute and at other institutes in California, other doctors and researchers got in on this and mapped his brain, the EEG standard way and then another way called the brain mapping. In one case the brain mapping that was done shows a picture of the alpha band and it increased from resting to processing state forty times, not forty percent, forty times what it started out as. These scientists had never seen anything like this, ever, from a human brain.

Philip, Dr. Savage is unique there's no two ways about it; it's been documented for 30 years so we need no more proof. We have all the proof anyone could ever ask for and he has a team of people he's worked with, he can train people, teach people, and when I met Philip I was able to see that there was something extraordinary about him and his commitment and his vitality and his concerns and his stature. **I met him before I knew what he stood for but I recognized it as something very grand, and very high, very purposeful, for people but also for all of nature, animals, trees and the earth itself. His appearance was timely. We're in a critical time; I knew that so there's got to be a solution! As soon as I met Philip, I knew we had a solution and it was up to us to use him.**

**PS: The trick is there is no spoon, there is no fire, no, nothing is really real, but fire is an illusion. The druids – the real ones – had a special concept, for fire and that was not part of the elements but it was a usurper of elements. It looks alive, air, ground and fire – no, fire is an illusion, like time, like many things, but this one is so easy to unveil, to expose as an illusion through experiment. So that's why I have such rate of results, amazing and I guarantee someone who has been burned third degree, barbecued, they are going to give him mega doses of morphine and let him die in an hospital – I guarantee that person can play tennis basically without scarification 3 weeks later, if I can take care or any one of my students could take care of that person. Which means ultimately the 100% of success and without scarification – within minutes of exposure to fire. After an hour I could, or they could, my students, have a slight rate of unsuccesses, after a day – this is too late. Ok, so rush when you burn yourself -- rush.**

This is Camille I spoke to you about an hour ago and another half an hour ago. I just wanted to thank you so much – **my pain is literally at a zero and the burn is like, you can hardly tell that there's a burn there -- it's pretty much all healed. But I just wanted to thank you so much, and I am definitely going to pass the word to everybody about this.**

Hello Doctor Watson this is Mitchell and **I wanted to say thank you again for helping me with my pain relief in my burn situation and – let you know that it's now down to less than one as far as the pain scale goes from a scale of one to ten. I can't thank you enough and I will tell everybody I know!**

This is Clarissa, calling you back this is not quite thirty minutes, it's been 22 minutes. All pain is gone. Thank you very, very much.

Scott: Returning your call at the half an hour mark as requested. This is Scott, I feel no pain, I haven't been thinking about it. I thank you and I am going to go to your web site and pass the word.

Hi This is Yolanda, thank you very much and the sting and the pain is completely gone, and so it's just amazing and, quite amazing that the pain is gone and it feels completely fine now, so I don't know how you do it but I really appreciate it. Thank you so much.

Judge Barnhart: My theory on how it works? I have not a clue, I mean you **tell me how quantum entanglement works, I don't know, yet physicists have observed it and they tell me that you change the spin of this electron and instantly no matter where it is the spin of that other electron will change, ok? How does it work? I don't know!**

Mary Badham: **However you want to look at it I really don't care what it is as long as it works, but this works, it definitely works. You know if it was your child, your grand baby, pulled a pot of boiling water over themselves what would you do? I would call the FBD immediately as well as 911 because I have seen this work and it's phenomenal!**

**Vitali:** Well certainly I was amazed with how well it worked, you know being somewhat of a scientific background – I have two masters degrees, **I was basically wondering – how it works and I still wonder – how it works. I guess there is more to life than what we normally see, there is more to consciousness than what we perceive – a regular person perceives.**
